

It is time to install support beams for the second crane at house 10. Crane 2 is positioned as shown below. The work can cause vibrations and could be disturbing due to loud noises.

In order to minimize interference, the establishment and driving of the support beams into the ground will **start on Friday, March 29, and then continue on Saturday and Sunday.**

Vibration meters have previously been deployed at different locations at Ångström according to risk analyses. If the limit values are exceeded, the work will be interrupted. Operations with sensitive equipment (and vibration meters) have been informed.

Work is also underway to, as far as possible, reschedule lectures from house 2 level 0 on Friday, March 29.
