

NCC need to drive Support beams for the foundations for house 10. It is a smaller job and not of the same extent and depth as house 9, which means less interference.

- The establishment of the machinery will take place on Jan. 15.
- The driving of the support beams into the ground will start on Jan. 16 and will be finished by Jan. 21. Working hours will be 7.00 am to 8.00 pm. See overview of estimated disturbance areas below.
- Vibration meters are installed and are set to 2mm/s.
- Noise levels will not be too high that normal activity like teaching in house 2 should be disturbed. However, it is likely that the work will be heard periodically within the Ångström Laboratory.
- Researchers using sensitive equipment (incl. vibration meters) have been informed.
